EXPERIENCE

APRIL 12, 2007, TO PRESENT

LEAD MECHANIC/FORMAN-PRIME MECHANICAL

Read construction blueprints, organize work crews and materials for construction/installation of commercial and industrial HVAC systems. Excavate site for underground utilities or equipment foundations. Form, pour and finish concrete, wreck forms, install underground piping and backfill site.

Install and connect HVAC equipment (including pumps, chemical feed equipment, air handlers, chillers, cooling towers, and boilers) to piping systems and auxiliary components.

Measure, cut, fit, hang or support, and weld pipe and fittings to effect system installation per drawings.

Provide additional points of access for control system components. Flush and test installation for pressure and flow.

Provide start-up support and water system treatment at the start-up of the system.
